Profile

Software engineer turned product thinker, with industry experience delivering fintech solutions for banks and financial institutions. Currently pursuing an M.Sc. in Business Informatics at TU Wien. I bridge the gap between engineering depth and strategic decision-making, and have a clear focus on Technical Product Management roles in AI-forward environments.

Work Experience

06/2026 – present
Vienna, Austria

Private Equity Working Student AI, Technology & Automation

Lacus Legacy | Pharmacom & Portfolio Companies

- Analyzed the business procedures in different domains, such as order management, accounting, analysis, and more within the company.
- According to the analysis, provided automation/product solutions to reduce unnecessary workload and increase process efficiency using tools like Microsoft Power Automate, n8n, and web-based full-stack product development.

04/2024 – 10/2024
Istanbul, Türkiye

Software Developer

VeriPark

11/2023 – 04/2024
Istanbul, Türkiye

Associate Software Developer

VeriPark

Banking software solutions provider – clients include top-10 European & MENA banks

- Built and shipped 5+ banking and finance modules (mortgage, credit card application, term life insurance, loan origination) using Angular.js, C#, XML, and SQL.
- Served enterprise banking clients across Europe and the Middle East. Collaborated with business analysts and QA teams to prioritize feature delivery across products.
- Promoted from Associate to Software Developer within 6 months, reflecting consistent delivery and technical growth.

03/2022 – 09/2023
Istanbul, Türkiye

Intern at Data Warehouse and Business Intelligence & MIS

Yapı Kredi Teknoloji

One of Turkey's largest private banks – BI & MIS team

- Designed and developed internal web applications using ReactJS and Flask, reducing manual reporting effort for the BI team.
- Built Python-based image processing pipelines to automate data validation against Power BI dashboards, eliminating error-prone manual checks.
- Worked 18 months across two internship cycles during my studies.

02/2022 – 02/2022
Istanbul, Türkiye

Intern at Software Architecture Team

Şekerbank T.A.Ş.

- Developed “Apistant” an API analyzer tool built with Java Spring Boot, designed to automatically parse and surface key characteristics of APIs, improving developer documentation workflows.
